

## PICT

### PROGRAMMABLE INTEGRATED COMMUNICATIONS TERMINAL

## Product Overview

Extant's rugged, modular PICT supports multiple secure and non-secure voice communications for both military and industrial applications. In its shipboard application, a single PICT integrates the user's voice access to telephones, tactical intercoms, radio communications, public announcements, and casualty reporting systems. The PICT interface configuration can be ordered to meet user applications and is compatible with all current hookups on U.S. Navy ships. It is designed for installation into console cutouts as well as location specific enclosures for mounting on fiddleboards, bulkheads, pedestals, etc. A simple user-programmable touch screen provides control of the interfaces with a natural graphical color interface. The PICT unit provides for the use of a headset, handset, push-to-talk foot switch, embedded speaker and microphone in the front panel for intercom use and also provides connectivity for an externally powered speaker. Up to 40 single-action keys can be programmed for frequently called circuits.

## \*Part Numbers

### PICT PRODUCTION

PART NUMBER	PRODUCT
67040-3	PICT 7500
67350-1	PICT 7500 Isolation Kit
67358-1	HANDSET HOLDER
67040-4	PICT 7500 TRAINER
502-219-007-661	UNIVERSAL HANDSET

### PICT DEPOT REPAIR

PART NUMBER	PRODUCT
411140-101	PICT 7300-2011
411140-100	PICT 7300-2211
