Product Overview

Cabin Telecommunications Unit and eRouter (part of SatCom communication system)

AeroCom 1100

Cabin Telecommunications unit that provides analog voice, data and fax to the aircraft. The system can integrate up to 5 separate terminals or channels including Inmarsat and Iridium Terminals. It offers many calling features such as multiparty conferencing, call transferring, call queuing as well as detecting a loss of service.

AeroComm 3000

Cabin Telecommunications unit that can provide up to 36 station (analog telephone) ports and offers many calling features such as multiparty conferencing, call transferring, call queuing and credit card calling. Aerocomm 3000 can interface with multiple systems including Iridium systems eliminating the need to add special interface box.

eRouter

The eRouter provides scalable data and voice routing services designed for Aircraft applications. It connects users via peer to peer and to the internet via Wi-Fi and can be configured as a wireless Access Point for on-board user access.
